

Great Waste vs. Taste Great

It's a basic fact...a better package...means a better tasting take home dining experience.

Research has demonstrated this. The new **Culinary Basics** line of hinged takeout containers offers your consumer a quality take home dining experience for about the same price as polystyrene. **Culinary Basics** are available in two convenient single-compartment sizes: 9" x 9" and 9½" x 10½" with 2½" deep profiles. Classic black bases and clear anti-fogging lids make it the clear choice when presenting your customers with your tastefully prepared deli items.

- **Durable and leak resistant.** Culinary Basics are more durable than styrene, without the worries of tearing or cutting through with a knife and fork.
- **Hot food that Smells Good.** Culinary Basics are heat-tolerant, and superior to polystyrene, PET, and PS foam for hot food applications. No off-odors or flavors.
- **No waste.** Culinary Basics are dishwasher safe and can be re-used by the consumer.

And when you need the ultimate performance in a take home package, ask us about our award-winning **Culinary Classics** product line—8 containers, 3 sizes, with 1-3 compartments in a deeper 3" profile.

For more information on either product. Go to our website www.anchorpac.com and the **WHERE TO BUY** section to find the nearest salesperson near you.
