

HOT! HOT!
HOT!

NOT! NOT!
NOT!

Looks can be deceiving. A Polystyrene bowl, like the one on the right, will break down when exposed to heat. But for about the same price, the new Incredi-Bowl on the left will stand up to temperatures of up to 230°F. Made from polypropylene, the Incredi-Bowl is the perfect bowl for heat lamps, warming units, warming tunnels, and microwaves.

And with polypropylene anti-fog vented lids, you can count on crystal clear presentation of your food. Available in 12-20 oz. sizes, the Incredi-Bowl offers the industry a crack-resistant, leak-resistant solution for all of its soup, pasta, and prepared food needs.

...so if your bowl can't handle the heat, get it out of your kitchen!

Incredi-Bowl
