

# Sustainable Solutions in Packaging

Anchor Packaging manufactures innovative package solutions with performance characteristics to maintain food quality for delivery and takeout. Our products are used for meals, side dishes, and family portions offered by restaurants, fast-food chains, and other food-service operations. Our packages merchandise prepared, ready-to-eat and ready-to-reheat in the microwave foods, found in grab and go displays at supermarkets and convenience stores.

The unique, patented convection cross-flow design in Crisp Food Technologies® containers keeps fried foods hot and crispy on display or 30-minute home delivery. Anchor Packaging's line includes stock and custom rigid packaging and a broad line of cling film wraps. All products are PFAS-free, BPA-free, Kosher-approved and made in the USA.

EPA Solid Waste Management Hierarchy

All rigid products are manufactured in polypropylene (PP) or polyethylene terephthalate (PETE); the two most recycled food packaging materials nationwide. Over 300 stock products are available in these materials.

The PP bases listed in this brochure include natural mineral additives reducing the use of oil-based resin by 40%. The Culinary Lites® value line of hinged containers are made with lower weight material without giving up performance. The PETE bases and lids are made with a minimum of 10% FDA approved, post-consumer recycled content (RPET.) Anchor Packaging proudly follows the EPA's Solid Waste Management Pyramid Strategy of "Reduce, Reuse, Recycle, and Recover."

**REDUCE:** Our product development team has greatly reduced the use of petroleum-based resins in our products through design, process, and material engineering without sacrificing performance. All PP bases listed include natural mineral additives reducing the use of oil-based resin by 40%. All of the RPET products we manufacture use a minimum of 10% FDA approved post-consumer recycled content. Focus on source reduction and minimizing the carbon footprint drive all product development.

**REUSE:** Anchor Packaging is the winner of the Greener Package award for significantly reducing the environmental footprint of packaging. We were the first to introduce the "green" concept of consumer reuse, then recycle, PP containers. This durable material allows multiple uses and is top-shelf dishwasher safe.

**RECYCLE:** Popularity of collection systems makes it possible for all of our rigid containers to be recycled curbside. PETE  $\Delta$  is the most recycled material nationwide and PP  $\Delta$  has been identified as the best plastic packaging alternative for polystyrene and other materials that are not accepted in many communities recycling systems.

Anchor recycles virtually 100% of the raw materials used in manufacturing.

**RECOVER:** When incinerated in a waste-to-energy facility, PP produce the highest per ton BTU energy value of any waste material; 38 million BTU per ton. This is twice the energy of coal, the primary source for electric power generation in the U.S.

Check your community recycling information

# HOT FOOD DELIVERY & MICROWAVABLE

PP  - Bases and lids Ideal for hot prepared entrees and side dishes for breakfast, lunch, dinner or snacking on the go.

-  Durable cut-resistant material in black or natural (Nat) bases preserves the presentation
-  Clear anti-fog lid provides food visibility to eliminate order errors & increases impulse sales
-  Leak-resistant closure eliminates messy spills, reducing food waste
-  Withstands temperatures to 230°F under heat lamps, in warming units and the microwave
-  Combined with RPET lids increases sales in chilled displays of microwavable foods.
